Zhang, Zu-Jun, MD, 18

Cumulative Subject/Title Index, Volume IX, JBC&R

1.0 Anesthesia

2.0 Antiinfectives

Use of 5% sulfomylon (mafenide) solution after excision and grafting burns, 602-605

3.0 Antimicrobial

Combined topical use of silver sulfadiazine and antibiotics as a possible solution to bacterial resistance in burn wounds, 359-363

Comparison of 1% silver sulfadiazine with and without 1% chlorhexidine digluconate for topical antibacterial effect in the burnt infected rat, 35-40

Hearing loss following the application of topical neomycin, 162-164

Leukopenia in non septic burn patients receiving topical 1% sulfadiazine cream therapy: A survey, 606-609

Mafenide-induced pseudochondritis, 145-147

The role of topical treatment as a determinant of infection in outpatient burns, 253-257

4.0 Biologic Dressings

5.0 Body Systems Alterations

Alterations in plasma copper, zinc, and ceruloplasmin levels in patients with thermal trauma, 13-17

Burns in pregnancy, 485-487

Effects of body surface thermal injury on apparent renal and cutaneous blood flow in goats, 26-30

Hepatic and intestinal blood flow following thermal injury, 347-350

Induction of hypertriglyceridemia in rabbits by thermal injury: Time course of elevated plasma triglyceride levels, 266-270

Levels of cofactors for lipoprotein lipase and lecithin-cholesterol acyltransferase in plasma patients with severe thermal injury, 18-21

Renal vein thrombosis in burned children, 472-473

The role of oxygen derived free radicals in burn-induced myocardial contractile depression, 589-598

Skeletal changes after burn injuries in an animal model, 148-151

Thermal trauma and gastrointestinal function: III. Effect of hot-and-cold burn trauma on small intestinal weight and mucosal mass of mice, 351-353

6.0 Burn Shock

The effects of aging on the cardiac contractile response to unresuscitated thermal injury, 41-51

Pulse oximetry for vascular monitoring in burned upper extremities, 63-65

Review: Calculation of fluid therapy: Electrolyte disorders, 413

7.0 Burn Team

Collaborative physical therapy for a 4-month-old infant with 80% full-thickness burns, 193-195

The efficacy of an autonomous burn physical therapy department in a hospital setting, 195-197

Risk management in children with burn injuries, 75-78

8.0 Burn Wounds, Closure, Coverage

A preliminary report on transplantation of microskin autografts overlaid with sheet allograft in the treatment of large burns, 629-633

Aloe vera gel hindered wound healing of experimental second-degree burns: A quantitative controlled study, 156-159

Cross-linked silver-impregnated skin for burn wound management, 476-482

Effect of graft bed on long-term functional results of extremity skin grafts, 72-74

Halo immobilization in the treatment of burns to the head, face, and neck, 187-189

Lanolin and epidermal growth factor in healing of partial-thickness pig wounds, 279-284

Laser doppler monitoring of microcirculatory changes in acute burn wounds, 57-62

Synthetic and biosynthetic skin substitutes, 209

Temporary skin substitutes for burn patients: A nursing perspective, 209-215

9.0 Chemical Burns

Phosphorus burns: A practical approach to the local treatment, 474-475

10.0 Clinical Management

An effective method of positioning the burn patient, 288-289

The Everett Idris Evans Memorial Lecture-1987: Twenty-five years' experience treating burns, 106-117

Prevention of pressure necrosis over the medial epicondyle: The use of eggcrate cuffs, 290-292

Pruritus in burns, 305-308

Use of a pillow in exercises for burn patients, 290

11.0 Debridement

12.0 Devices

A comparison of storage viability of nonmeshed and meshed skin at 4C, 634-636

A new instrument for serial measurements of elasticity in hypertrophic scar, 657-660

Application of singler donor fibrin glue to burns, 619-622

Evaluation of automatic disposable rotating cartridge skin staplers, 538-546

Modern concept for a new improved, microporous skin closure tape, 532-537

The use of overhead hooks in burn surgery, 492

The use of vascular clips to approximate skin grafts, 490-491

13.0 Economics

14.0 Education

An outreach burn prevention program for home care patients, 645-647

Evaluation of burn discharge teaching, 643-644

15.0 Electrical Burns

16.0 Emergency Care

17.0 Endocrinology

18.0 Epidemiology

19.0 Etiologic Agents

Chemistry of cement burns: Pathogenesis and treatment, 258-260

Children under age five and butane cigarette lighters, 423-424

Facial and scalp burns from hair activator products, 524-525

Fatal transcutaneous iron intoxication, 385-388

Fire pit burns, 520-523

Scalds from molten tar: An industrial hazard, 218-219

20.0 Excision/Grafting

An unusual donor site, a lifesaver in extensive burns, 637-639

Lack of immediate effects of wound excision on the hyperdynamic circulation of burned patients, 180-183

Reduced wound contraction after grafting of full-thickness burns with a collagen and chondroitin-6-sulfate (GAG) dermal skin substitute and coverage with biobrane, 364-370

Short-term skin preservation at 4°C: Skin storage configuration and tissue-to-volume medium ratio, 52-54

21.0 Hematology
The burned hemophiliac, 389-390

22.0 Infection
The epidemiology of methicillin resistant Staphylococcus aureus in a burn center, 610-612
Noncandidal, fungal infections of the burn wound, 599-601
Prolongation of skin allograft survival by pretreatment of allograft with monoclonal antibody and steroids, 623-628
Use of nonsterile gloves for routine noninvasive procedures in the thermally injured patients, 613-615
The value of culturing central-line catheter tips in burn patients, 66-68

23.0 Immunology
An evaluation of cyclophosphamide as an immunomodulator in multiple septic animal models, 271-274
Antibody activity, contained in a commercial pseudomonas hyperimmune globulin product, against various members of the family enterobacteriaceae, 285-287
Effect of topical applications of silver sulfadiazine on the natural killer cell activity in a rat model of thermal injury, 152-155
Immunologic alterations following excisional wounding and immediate repair with syngeneic or allogeneic skin grafts, 354-358
Micronucleus frequency in peripheral lymphocytes for the differential diagnosis of radiation injuries combined with thermal burns, 275-278
The suppressive effect of subeschar tissue fluid upon in vitro cell mediated immunologic function, 584-588

24.0 Nursing

25.0 Nutrition
Assessment of nutritional status in burn patients, 432-433
Metabolism of fat emulsions by thermally injured patients, 31-34
Reassessing caloric requirements in pediatric burn patients, 616-618

26.0 Pain

27.0 Pediatrics

28.0 Pharmacology
Burns in substance abusers and in neurologically and mentally impaired patients, 169-171
Evaluation of the effect of topical steroids on human scar contracture using a nude mouse model, 640-642
Postburn delirium associated with use of intravenous lorazepam, 160-161

29.0 Post Mortem Exam
Discharge planning for burn patients, 414-418

30.0 Prevention
A one-hour burn prevention program for grade school children: Its approach and success, 69-71
Fire prevention for teenage mothers enrolled in high school, 648-649
International concepts of fire protection: Ideas that could help U.S. prevention, 312-313
Protecting patients against adverse government intervention, 430-431
Puppets for prevention, playing safe is playing smart, 650-651

31.0 Psychiatry
Long-term psychosocial adjustment following burn injury, 661-665
Multidisciplinary approach to working with burn victims of child abuse, 79-82
Preexisting psychiatric disorders in burn patients, 83-86
Self-inflicted burns, 178-179

32.0 Psychology
Psychological states in adaptation following burn injury: A method for facilitating psychological recovery of burn victims, 376-384
Physical and psychological outcome after burns, 172-177

33.0 Psychosocial Aspects

34.0 Reconstruction
A new alternative in burn reconstruction: The muscle vascularized pedicle flap, 652-656
Burn-induced cosmetic disfigurement: Can it be measured reliably?, 371-375
Salvage of both lower extremities using simultaneous bilateral gastrocnemius and soleus muscle flaps: A case report, 184

35.0 Rehabilitation
A multi-disciplinary model for burn rehabilitation, 191-192
A new hydrofitness device for leg musculo-skeletal conditioning, 203-206
A new hydrofitness device for strengthening muscles of the upper extremity, 402-406
A new porous cohesive support bandage, 294-297
Appliance therapy for perioral electrical burns: A conservative approach, 391-395
Burn contractures: Incidence, predisposing factors, and results of surgical therapy, 261-265
The burn rehabilitation swimming program, 290-291
Case report on the use of CPM on an electrical burn, 401
Comparison of complications during rehabilitation between conservative and early surgical management in thermal burns involving the feet of children and adolescents, 92-95
Complications of burn care in patients with neurologic disorders, 482-484
Computer-drafted pressure support gloves, 165-168
Efficacy of continuous passive motion (CPM) devices with hand burns, 396-400
Electrolyte changes caused by hydrotherapy in purpura fulminans, 488-489
Evaluation of buoyant hydrofitness devices for leg musculoskeletal conditioning, 298-301
Evaluation of flotation devices for deep-water exercise, 407-412
Hydrofitness devices for strengthening upper extremity muscles, 199-202
The microstomia prevention appliance: 14 years of clinical experience, 90-91
Relating mental health and physical function at discharge to rehabilitation status at three months postburn, 87-89
Structured exercise circuit program for burn patients, 666-668

36.0 Respiration
Dimethylsulfoxide with heparin in the treatment of smoke inhalation injury, 22-25
Effect of preexisting inhalation injury on response to bacteremia in sheep, 467-471
Lack of hemotogenous mediated pulmonary injury with smoke inhalation, 462-466
Managing the difficult airway in patients with burns of the head and neck, 55-56
Therapeutic hyperbaric oxygen: Help or hindrance in burn patients with carbon monoxide poisoning?, 249-252

37.0 Review Articles
Burnware: Computer applications in the burn unit, 207-208

38.0 Secondary Complications

39.0 Sequelae

40.0 Severity, Morbidity, Mortality
Burn patient registries in the United States: A survey, 96-101
Strategies to improve burn center utilization, 102-105
